Plant Now in 1951

Why plant now? A few minutes reflection will supply the answer. It is now becoming apparent to all that the demands of our defense program are going to increase rather than lessen in the foreseeable future. As a result the cost of most items in all fields has risen or will rise. However, if you will compare the prices of nursery material in this catalog with those in the 1950 catalog you will find that we have done our utmost to hold them down, despite increased costs to ourselves in many respects. Likewise, the future labor situation is most uncertain. Thus far we have managed to keep together our organization so that we shall be able to continue to give the same prompt, expert and solicitous attention to the wants and desires of our customers for the coming year. But no-one can guess as to when greater man-power demands of our government will curtail many services. Therefore there is no better time to take care of your landscape needs than right now. SPRING, 1951.

Landscape Department

Whether the landscape work you are contemplating consists of a foundation planting, shrub border, flower garden or the complete development of your property, Bay State Nurseries is prepared to take over as much of the work and as many of the problems as you desire. Our Landscape Department is composed of Graduate Landscape Architects to plan and design your landscaping, and crews of trained foremen and plantsmen skilled in handling plant materials. This Department awaits the opportunity to use its talents to develop beauty, utility and privacy on your property.

Budget Your Landscape Work

Even though at first glance the complete development of your property may seem to be more than you care to undertake at one time, a discussion of your needs with one of our landscape representatives may show how you can budget both the work and the expense over a convenient period of time. In any case, the logic of proceeding from a well-thought-out plan is self evident.

Location of Bay State Nurseries

Bay State Nurseries, Inc., is located at North Abington, Massachusetts; 18 miles south of Boston on highways 18 and 58 to Cape Cod.

We cordially invite visitors to our Nurseries. See for yourself the many acres of trees, evergreens, flowering shrubs and perennials we have growing here.

EVERGREENS

For continuous year-round beauty and service evergreens are unsurpassed. Dwarf, slow-growing varieties are superb for foundation plantings; taller types for privacy, windbreaks and specimens. They are dug, balled and burlapped.

RHODODENDRONS AND AZALEAS

Beyond doubt, the showiest and most beautiful shrubs are in this group. Rhododendrons are evergreen while the Azaleas are largely deciduous; but both classes prefer semi-shade and cool, rich soil without manure. They are superb for foundation plantings, border and under trees, alone or in groups. All are dug B-B at no extra charge.

RHODODENDRON		Size	Each	Per 10

Named Hybrid Rhododendrons

The best qualities of many Rhododendrons are contained in these hybrids. Deeper, purer colors in an incredible range; larger, lustrous, heavy leaves; and sturdy compact plants make these garden aristocrats.

Planting Suggestions

All our Evergreens are shipped with the roots in a ball of earth securely wrapped in burlap. It is important not to let this ball of earth become dry. When planting, be sure to dig a hole large and deep enough to receive ball without breaking or forcing. Remove the burlap before filling in with good soil. If the ground is dry, the hole should be partly filled with well-trodden earth and then filled with water. When the water has soaked in, put in more earth and more water, repeating the process until completed. If a slight depression is left about the base of the plant, it will help in future watering.

All newly planted Evergreens should be made as firm as possible, that is, do not hesitate to tread the soil on the surface of the ground or to tamp it with a stick until it is very firm. Planted in this way, the plant is well anchored and not likely to be loosened by strong winds or heaved out by frost.

When handling bare-rooted trees or shrubs it is doubly important not to allow the roots to dry out. If they cannot be planted immediately upon receipt, the bundle should be opened and the material heeled in in a convenient trench and covered with soil until ready to be planted.

In planting bare-rooted stock, the hole should be dug large enough to accommodate the roots without bending or crowding, and deep enough so that the plant will set a little deeper than it did in the nursery. Any damaged portion of the roots should be removed before planting. The soil should be filled in around the roots to exclude all air pockets and watered as described for evergreens.

SHADE AND FLOWERING TREES

For shade, select long-lived trees that increase in beauty yearly; although where immediate privacy is the objective, short-lived rapid growing varieties have their place. The Flowering Trees provide delightfully colorful and fragrant specimens and accents for lawn and gardens.

ACER

dasycarpum

Quick-growing, gracefully slender tree to 80 feet. Golden Autumn foliage. For rapid screening.

Peat Moss

Peat moss is one of the finest of soil conditioners. It will absorb as much as 20 times its own weight in moisture, and retain this moisture in available form for thirsty plant roots.

Peat will help to lighten a heavy soil and will also add humus to a light sandy soil. Use it in a mixture of $\frac{1}{3}$ peat to $\frac{2}{3}$ loam when filling around plants.

When used as a mulch, especially around evergreens and azaleas, it keeps the soil cool around the roots and reduces weed growth.

Prices: **Large bale \$5.50** **Handy bale \$3.75**

PERENNIALS

Our list of Perennials is arranged to assist you in planning your garden. We have indicated for each variety the approximate height and time of bloom, the color, and any special uses to which the plant is adapted.

In the column "Use" the following abbreviations are used.

- C — Cutflowers
- E — Edging plants
- G — Ground covers
- H — Herbs
- R — Rock garden plants
- S — Plants that may be used in shade.

All Perennials are \$.60 each, 3 of one kind \$1.50, 10 of one kind for \$4.50, except as otherwise noted. Five or more plants of one kind will be furnished at the 10 rate.

Outstanding Perennials for 1951

On this page is a list of Perennials that we believe should be in every garden. Some are new, some are rare, all are outstanding. We suggest that you order some to fill in the spaces in your garden, to replace unattractive varieties, or as a pleasing part of your new garden.

Border Gem Thyme. *Thymus vulgaris* var.

One of our own introductions that has proved to be one of the best ground covers, especially on bankings. Good, too for edgings or the rock garden. Deep green, fragrant evergreen foliage.

Dwarf Coreopsis, *Coreopsis verticillata nana*.

Tiny bright orange flowers springing from low green tufts of leaves.

Emerald Cushion Creeping Phlox.

Rich green foliage that remains attractive throughout the Summer. Two varieties, blue and pink.

Golden Star, *Chrysogonum virginianum*.

Rich green mounds studded with golden stars. Fine for edgings or rock gardens.

Loddon Gold Helianthus.

Large, fully double Dahlia-like orange flowers on stiff stems. One of the best cut flowers. Unsurpassed for a bright mass of late-season color.

Mordens Pink Lythrum.

Long spikes of clear pink make a bright display for many weeks at a season when color is often lacking in the Perennial garden.

Rose Elf, *Pentstemon*.

An improvement on older varieties, shorter, sturdier and more compact. Clear, bright pink flowers.

Sammy. Hardy Carnation, *Dianthus*.

Gray-green pincushions, tiny double rose-pink Carnations.

Shell Pink Balloonflower—*Platycodon*.

A new color in this popular perennial.

Silver Mound. *Artemisia schmidtiana nana*.

Soft, feathery gray mounds for edgings or rock gardens. Recently featured in Garden Club exhibits at Boston Spring Flower Show.
